PROJECTS

STUDENT RESULT MANAGEMENT SYSTEM

A Student Result Management System is a software application that automates the recording, processing, and analysis of student academic performance.

It enables efficient result generation, grading, and report management for educational institutions.

[GitHub Repository](#)

Food Pooling System

Developed a Food Pooling System that enables users to share, request, and donate excess food within a community. The platform connects donors and receivers, helping reduce food waste and support people in need.

TO-DO LIST WEB APPLICATION

A simple and modern to-do list web application built with Next.js, React, and Tailwind CSS.

Features real-time data persistence using Firebase Firestore and a seamless user experience with anonymous authentication.
